</table>

Major sea ports

Absolute added values for the lodging and catering sector and for the fishing sector are displayed as percentages of the total added value for each administrative unit. "Absolute added value" is defined as the amount that production factors used by companies add to the value of goods and services consumed.

For the lodging and catering sector, the three classes are centered around the European mean value using half a standard deviation. Because of its non-normal distribution, natural break-downs have been used to delineate the three classes for the fishing sector.

It should be noted that the information has been calculated at the NUTS 2 or NUTS 3 level but is being displayed only for those NUTS 2 regions which are part of the coastal zone, activities and conditions in other parts of the NUTS 2/3 regions (in the hinterland of the coast) may therefore influence the values portrayed.
